### REC\_DS using C\_Week 7\_COD\_Question 3

Attempt : 1

Total Mark : 10

Marks Obtained : 10

### Section 1 : Coding

#### 1. Problem Statement

In a messaging application, users maintain a contact list with names and corresponding phone numbers. Develop a program to manage this contact list using a dictionary implemented with hashing.

The program allows users to add contacts, delete contacts, and check if a specific contact exists. Additionally, it provides an option to print the contact list in the order of insertion.

#### *Input Format*

The first line consists of an integer  $n$ , representing the number of contact pairs to be inserted.

Each of the next  $n$  lines consists of two strings separated by a space: the name of the contact (key) and the corresponding phone number (value).

The last line contains a string *k*, representing the contact to be checked or removed.

### **Output Format**

If the given contact exists in the dictionary:

1. The first line prints "The given key is removed!" after removing it.
2. The next *n* - 1 lines print the updated contact list in the format: "Key: X; Value: Y" where X represents the contact's name and Y represents the phone number.

If the given contact does not exist in the dictionary:

1. The first line prints "The given key is not found!".
2. The next *n* lines print the original contact list in the format: "Key: X; Value: Y" where X represents the contact's name and Y represents the phone number.

Refer to the sample outputs for the formatting specifications.

### **Sample Test Case**

Input: 3

Alice 1234567890

Bob 9876543210

Charlie 4567890123

Bob

Output: The given key is removed!

Key: Alice; Value: 1234567890

Key: Charlie; Value: 4567890123

### **Answer**

```
// You are using GCC
```

```
#include <stdio.h>
```

```
#include <string.h>
```

```
#include <stdlib.h>
```

```
#define MAX 50
```

```

struct Contact {
    char name[11];
    char number[20];
};

int main() {
    int n, i, j;
    char key[11];
    struct Contact contacts[MAX];
    int found = 0;

    scanf("%d", &n);

    for (i = 0; i < n; i++) {
        scanf("%s %s", contacts[i].name, contacts[i].number);
    }

    scanf("%s", key);

    for (i = 0; i < n; i++) {
        if (strcmp(contacts[i].name, key) == 0) {
            found = 1;
            printf("The given key is removed!");
            for (j = i; j < n - 1; j++) {
                contacts[j] = contacts[j + 1];
            }
            n--;
            break;
        }
    }

    if (!found) {
        printf("The given key is not found!");
    }

    for (i = 0; i < n; i++) {
        printf(" Key: %s; Value: %s", contacts[i].name, contacts[i].number);
    }

    return 0;
}

```

**Status :** Correct

**Marks :** 10/10
