Name: Hrishivendan P

Email: 241801094@rajalakshmi.edu.in

Roll no: 241801094 Phone: 9345916829

Branch: REC

Department: I AI & DS FB

Batch: 2028

Degree: B.E - AI & DS

## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 1\_COD\_Question 5

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Imagine you are tasked with developing a simple GPA management system using a singly linked list. The system allows users to input student GPA values, insertion should happen at the front of the linked list, delete record by position, and display the updated list of student GPAs.

#### **Input Format**

The first line of input contains an integer n, representing the number of students.

The next n lines contain a single floating-point value representing the GPA of each student.

The last line contains an integer position, indicating the position at which a student record should be deleted. Position starts from 1.

#### **Output Format**

After deleting the data in the given position, display the output in the format "GPA: " followed by the GPA value, rounded off to one decimal place.

241801094

241801094

Refer to the sample output for formatting specifications.

### Sample Test Case

```
Input: 4
    3.8
    3.2
    3.5
    4.1
    Output: GPA: 4.1
    GPA: 3.2
    GPA: 3.8
    Answer
    // You are using GCC
    #include<stdio.h>
    #include<stdlib.h>
    struct node
      float data:
       struct node *next;
    typedef struct node Node;
    void insert(Node **head,float x)
      Node *newnode;
      newnode=(Node *)malloc(sizeof(node));
      newnode->data=x;
      newnode->next=*head;
                                                   241801094
dead-
return;
      *head=newnode;
```

```
24,180,1094
void del(Node **head,int pos,int n)
      if(pos <= n){
        Node *current=*head;
        Node *temp;
        if(pos==1){
          temp=*head;
          *head=(*head)->next;
          free(temp);
          temp=NULL;
          return;
                                                                            24,180,1094
       oint count=1;
        while(current!=NULL && count<(pos-1))
          current=current->next;
          count++;
        temp=current->next;
        current->next=temp->next;
        free(temp);
        temp=NULL;
        return;
    void display(Node *head)
      Node *current=head;
      while(current!=NULL){
        printf("GPA: %.1f\n",current->data);
        current=current->next;
      }
      return;
    int main()
      Node *head=NULL;
                                                                            241801094
                                                  241801094
scanf("%d",&n);
```

```
241801094
                                                   24,180,1094
or(int i=C
float a;
scan
       for(int i=0;i<n;i++){
         scanf("%f",&a);
         insert(&head,a);
       int pos;
       scanf("%d",&pos);
       del(&head,pos,n);
       display(head);
       Node *temp;
       while(head!=NULL){
         temp=head;
return 0;
         head=head->next;
                                                   24,180,1094
```
