Department: I AI & DS FB

Batch: 2028

Degree: B.E - AI & DS

### NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 1\_COD\_Question 3

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Imagine you are working on a text processing tool and need to implement a feature that allows users to insert characters at a specific position.

Implement a program that takes user inputs to create a singly linked list of characters and inserts a new character after a given index in the list.

## **Input Format**

The first line of input consists of an integer N, representing the number of characters in the linked list.

The second line consists of a sequence of N characters, representing the linked list.

The third line consists of an integer index, representing the index(0-based) after

which the new character node needs to be inserted.

The fourth line consists of a character value representing the character to be inserted after the given index.

#### **Output Format**

If the provided index is out of bounds (larger than the list size):

- 1. The first line of output prints "Invalid index".
- 2. The second line prints "Updated list: " followed by the unchanged linked list values.

Otherwise, the output prints "Updated list: " followed by the updated linked list after inserting the new character after the given index.

Refer to the sample output for formatting specifications.

### Sample Test Case

Input: 5

```
a b c d e

2

X

Output: Updated list: a b c X d e

Answer

// You are using GCC
#include<stdio.h>
#include<stdlib.h>

int main()
{
    int n;
    scanf("%d",&n);
    char *ptr;
    ptr=(char *)malloc((n+1)*sizeof(char));
    for(int i=0;i<n;i++){
        scanf(" %c",(ptr+i));
}
```

```

                                                     24,80,1094
 int pos;
char '
       char letter;
       scanf("%d",&pos);
       scanf(" %c",&letter);
       if(pos<n)
       {
          for(int i=n;i>pos;i--){
            *(ptr+i)=*(ptr+(i-1));
printf("Updated list: ");
int i;
for(i=0.1
            printf("%c ",*(ptr+i));
          printf("\n");
       }
       else
          printf("Invalid index\n");
24,180,1094
```

Marks : 10/10
